

# Courbes de niveau

© Pierre Lantagne

Enseignant retraité du Collège de Maisonneuve

La première version de ce document est parue en janvier 2006. Ce document a servi à la création de figures pour illustrer un document pdf mis à la disposition de mes élèves du cours Calcul intégral avancé (cours EEE). Ce document pdf est disponible sur mon site Interent. Je rend donc disponible le fichier source Maple sans aucune documentation pédagogique.

Bonne lecture à tous !

\* Ce document Maple est exécutable avec la version 2020.2

## Initialisation

```
> restart;
> with(plots,contourplot,contourplot3d,display,setoptions,setoptions3d,
spacecurve);
with(plottools,transform);
    [contourplot, contourplot3d, display, setoptions, setoptions3d, spacecurve]
                                [transform] (1.1)
```

```
> setoptions(size=[300,300],labels=[x,y],tickmarks=[12,12],axesfont=
[TIMES,ROMAN,8],labelfont=[TIMES,ROMAN,8]);
setoptions3d(size=[300,300],labels=[x,y,z],tickmarks=[4,4,4],
axesfont=[TIMES,ROMAN,8],labelfont=[TIMES,ROMAN,8]);
```

L'initialisation suivante permettra d'avoir plus de lisibilité des nombres décimaux en supprimant les zéros non significatifs à la fin d'un nombre.

```
> interface(typesetting=extended); # Pour s'assurer le niveau de
composition étendue
Typesetting:-Settings(striptrailing=true);
                                extended
                                false (1.2)
```

## Paraboloïde circulaire

```
> f:=(x,y)->10-x^2-y^2;
z=f(x,y);
                                
$$z = -x^2 - y^2 + 10$$
 (2.1)
> Surface:=plot3d([x,y,f(x,y)],x=-5..5,y=-sqrt(25-x^2)..sqrt(25-x^2)):
> display(Surface,axes=framed,
orientation=[25,60],
lightmodel=light3,
```

```
shading=XY);
```

```
